Appendix 2

Acknowledgement

Being back to Vietnam more than 1.5 years now, I am still emotional thinking about Groningen. Everytime any flash of memory from 6.5 years in Groningen comes back, I almost can not hold my tears in the desire of return. Those were not only the best years of my life but also brought me through many challenges and helped me mature to a person I could never imagine. Everything came together like a movie, in which many people have been involved, some appeared in every scene, some just a moment, but all have given me strength, belief and will forever stay in the bottom of my heart.

First and foremost, I would like to express my sincerest thank in every possible way to my promotor Prof. P. Olinga for his tirelessly guidance and constant encouragement. Dear Peter, from the first day working together, I've known how lucky I am to have you as a supervisor, who unconditionally supports and helps. Your optimism and openness are incomparable and would be my inspiration and role model as a knowledge seeker. This is also a special moment for me to thank Judith for her collaboration, help and more importantly, her sympathies when Peter had to spend his valuable family and holiday time helping me to scratch out my manuscripts and dissertation drafts.

Secondly, I must address my gratitude to Prof. Erik Frijlink, who gave me a chance to do my research in the department, first as a master student and then later as a PhD student. I feel particularly fortunate to have this opportunity to be working under your guidance, I have learnt how to overcome my fear and doubts in the very first step into the academic research world. I also recognised that whenever you have passion and put faith into the work you are doing, you can achieve what you desire.

Thirdly, I would like to express my great appreciation to my co-promotor, Dr. Rick Mutsaers. Although you joined the group in the later phase of my project, your contribution was very important to my work. I feel genuinely indebted and thankful for your relentless effort on assisting me during the writing of this thesis.

I would like to thank the assessment committee, Prof. R. A. Bank, Prof. G.Dijkstra and Prof. G. M.Thiele, for taking their time to evaluate my manuscript. Your valuable comments and suggestions have improved greatly the quality of this thesis.

Dear my paranympen, Tobias van Haaften and Dorenda Oosterhuis, you are always my best friends who not only contributed significantly in this thesis but

also helped me to integrate and enjoy my best time in Groningen. Tobias, thank you for being my best company there, and also for the wonderful time when you were in Vietnam. I care for you like my own brother and sincerely believe that you will be successful in the future. Dorenda, thank you for being so nice to me the first time I met you, I always know that you are the one I can share everything with during my PhD project: happiness, joyfulness, anger, frustration

To Marrinella, I wish I could ask you to be my third paranymph if possible. You were one of the first to welcome me to the lab, and until the very last days still shared memories, plan and family stories. You've always been so nice, gentle and kind to listen to me blah-blah about everything during a chit-chat at lunch and coffee/tea break.

I would also like to thank my fellow PhD students, officemates and friends, who have given me wonderful moments and never hesitated to help me both in the work but also how to become 'Dutch'. First of all, deeply thank for Dr Herman Woerdenbag who gave me an opportunity to come from Vietnam to the wet and misty Netherlands' northern region. Thank you Wouter Hinrichs, Anko, Jan, Sonja for being very kind to me from the time I spent in lab as a master student and then a PhD student. Your eagerness to help, dedication, and professionalism show exactly the characteristic of typical Dutch people, which I have so much to learn from. It is also the same appreciate gratitude to Paul, Doetie, Anne De Boer, Caroline, Kees, Lida and other people in the department.

During my time in Groningen, I had a chance to work with various generations of PhD students in FTB. They all have made a pleasant environment for me to work and live as a second family. Special thanks to the seniors: Vinay, Hans, Parinda, Tien Thanh, Christina, Tofan who were shining examples for me to look up to and follow. To my fellow friends: Floris, Niels, Wouter, Anne, Marcel, Milica, Senthil, Maarten, Philip, Jasmin, thank you for being great friends and colleagues.

Beginning as a first member of Olinga's organ slice group, I had a precious opportunity to meet and work with almost everybody in the group, not only to have them as friends but also to collaborate and learn from them as colleagues. Sincere acknowledgement to all of you, especially, Naomi, Jo, Radit and Nia, Fransien Su, Isabel, Emma and Emilia, Jasper, Miriam. I was happy to welcome each of you to the group but very sad when I had to leave so early from our "band of brothers".

My gratitude goes to all members of PTT department for providing significant supports. Valuable comments and discussion from Prof. Geny Groothuis and Dr. Inge de Graaf had helped me tremendously to finish my work. Special thanks to Marina, Marjolijn and Miriam for not only helping me on my experiments but also strict with me on the labwork. I would also like to thank other people, Jan Visser, Gillian, Xiaoyu, Ming, Viktoria, Suresh, Eduard ... for your help during my project. I would like to show great appreciation to surgeons of the division of Hepato-pancreaticobiliary Surgery and Liver Transplantation who gave me the opportunity to access to the patient material during my PhD research.

Most of my work may never finish without the help from my reseach students, they have contributed significantly in the reseach, especially in pipetting. Loes and Lisselotte, thanks for your support and friendship, your smiles could shine the light in me during the gloomy Dutch winter days.

I would like to thank my Vietnamese friends in Groningen, especially the students in NPT project, Hoa, Thao, Thanh, Ho, Hao, Thai, Hanh Van. Other fellow vietnam students also helped me so much during my years living abroad, Tính-Tuấn Anh, Tuấn Anh-Hoa, Xuân Anh, Nhung-Đạt, Dứt, Hà-Thuỷ, Hồng, Hương,... I feel much closer to home and enjoy sharing activities with you. I would also acknowledge the Rector of Hanoi University of Pharmacy, my colleagues in Department of Pharmaceutics, HUP for continuous supporting and granting my leave during my Master and PhD study in Groningen.

Actually, I never have been able to complete this thesis without a colleague, a good friend. Indeed, a person who taught me all the tricks in the lab, a person who could sit down and gossip with me all day in the lab. Inge, you know that I am talking about you, special thanks to you mijn Sneeuw witje ! A lot of thing have changed since we first met and worked together, but until now you are still one of my best memories in Groningen. I am so much happy to see now you are enjoying your life with your loved ones.

Forever, the most important thing to me is my family. I was feeling deeply sad and regret when I was stuck in the Netherlands when my grandmother passed away. She was the one I gave most respect thanks to her endless love for us. There is also nothing compared to my greatest gratitude I have for my parents. They give me all the hope and optimism they have, critisize me when I was lazy, lift me up

when I was down. Thank you for being there whenever I need, to let me fall into your opening arms. Thank you for teaching me to love and be loved, to respect and be respected, that help me overcome challenges and difficulties. Sincere thanks to my parents-in-law for their love and support; my sister and my sister-in-law, my brothers-in-law for your caring and willingness to help.

Finally, to my little family, Phuong and Lucca. You know that you are the most precious people I have, whom I put on above everything and would never doubt about it. Thank you for being by my side for the last 12 years, thank you for sharing all the joys and tears, for being in love. I cannot imagine that we have spent 12 years together, in that more than a half was in a distance with so much complications. Those were tough years, but somehow we have overcome that and loving each other more and more. And to Lucca, my life has changed forever since your arrival.

Bedankt iedereen !!!
